

Figure 2. Locations of illuminance sensors relative to the classroom floor plan; sensors are centered on three axes in the East-West direction, but are not evenly spaced North-South. The center of the bottom sensor row is 2.2” from the South wall; the center of the next row of sensors is 4.8” above the center of the bottom row; the center of the top row of sensors is 0.9” below the North wall. When installed, the sensors will be about classroom task height. There is no defined orientation for the actual classroom--North is only used to refer to the top of this floor plan.
